

Package ‘ldblock’

October 17, 2020

Title data structures for linkage disequilibrium measures in populations

Version 1.18.0

Author VJ Carey <stvjc@channing.harvard.edu>

Description Define data structures for linkage disequilibrium measures in populations.

Suggests RUnit, knitr, BiocStyle, gwascat

Imports Matrix,.snpStats, VariantAnnotation, GenomeInfoDb, httr, BiocGenerics, ensemblDb, EnsDb.Hsapiens.v75, Rsamtools, GenomicFiles (>= 1.13.6), BiocGenerics (>= 0.25.1)

Depends R (>= 3.5), methods

Maintainer VJ Carey <stvjc@channing.harvard.edu>

License Artistic-2.0

Examples

```
# see vignette
```

downloadPopByChr	<i>download hapmap resource with LD estimates</i>
------------------	---

Description

download hapmap resource with LD estimates

Usage

```
downloadPopByChr(
  chrname = "chr1",
  popname = "CEU",

  urlTemplate = "http://hapmap.ncbi.nlm.nih.gov/downloads/ld_data/2009-02_phaseIII_r2/ld_%CHRN%"
  targfolder = Sys.getenv("LDBLOCK_TXTGZ_DIR")
)
```

Arguments

chrname	UCSC format tag for chromosome
popname	hapmap three letter code for population, e.g. 'CEU'
urlTemplate	pattern for creating URL given chr and pop
targfolder	destination

Details

delivers HapMap LD data to 'targfolder'

Value

just run for side effect of download.file

Examples

```
## Not run:  
downloadPopByChr()  
  
## End(Not run)
```

EUR_singletons *singletons from EUR*

Description

singletons from EUR

Usage

EUR_singletons

Format

character vector

Source

ftp://ftp.1000genomes.ebi.ac.uk/vol1/ftp/technical/working/20130606_sample_info/20130606_sample_info.xlsx, to which superpopulation codes were added

expandSnpSet	<i>Given a set of SNP identifiers, use LD to expand the set to include linked loci</i>
--------------	--

Description

Given a set of SNP identifiers, use LD to expand the set to include linked loci

Usage

```
expandSnpSet(
  rsl,
  lb = 0.8,
  ldstruct,
  chrn = "chr17",
  popn = "CEU",
  txtgfn = dir(system.file("hapmap", package = "ldblock"), full.names = TRUE)
)
```

Arguments

rsl	input list – SNPs not found in the LD structure are simply returned along with those found, and the expansion list, all combined in a vector
lb	lower bound on statistic used to retrieve loci in LD
ldstruct	instance of ldstruct-class
chrn	chromosome identifier
popn	population identifier (one of 'CEU', 'MEX', ...)
txtgfn	path to gzipped hapmap file with LD information

Details

direct use of elementwise arithmetic comparison

Value

character vector

Note

As of 2015, it appears that locus names are more informative than addresses for determining SNP identity across resources.

Examples

```
og = Sys.getenv("LDBLOCK_TXTGZ_DIR")
on.exit( Sys.setenv("LDBLOCK_TXTGZ_DIR" = og) )
Sys.setenv("LDBLOCK_TXTGZ_DIR"=system.file("hapmap", package="ldblock"))
ld17 = hmld(chr="chr17", pop="CEU")
ee = expandSnpSet( ld17@allrs[1:10], ldstruct = ld17 )
```

hmld	<i>import hapmap LD data and create a structure for its management; generates a sparse matrix representation of pairwise LD statistics and binds metadata on variant name and position</i>
------	--

Description

import hapmap LD data and create a structure for its management; generates a sparse matrix representation of pairwise LD statistics and binds metadata on variant name and position

Usage

```
hmld(hmgztxt, poptag, chrom, genome = "hg19", stat = "Dprime")
```

Arguments

hmgztxt	name of gzipped text file as distributed at hapmap.ncbi.nlm.nih.gov/downloads/ld_data/2009-02_phaseIII_r2/ . It will be processed by <code>read.delim</code> .
poptag	heuristic tag identifying population
chrom	heuristic tag for chromosome name
genome	genome tag
stat	statistic to use, "Dprime", "R2", and "LOD" are options

Value

instance of `ldstruct` class

Examples

```
getClass("ldstruct")
# see vignette
```

ldByGene	<i>Obtain LD statistics in region specified by a gene model.</i>
----------	--

Description

Obtain LD statistics in region specified by a gene model.

Usage

```
ldByGene(
  sym = "MMP24",
  vcf = system.file("vcf/c20exch.vcf.gz", package = "gQTLstats"),
  flank = 1000,
  vcfSLS = "NCBI",
  genomeSLS = "hg19",
  stats = "D.prime",
  depth = 10
)
```

Arguments

<code>sym</code>	A standard gene symbol for use with genemodel
<code>vcf</code>	Path to a tabix-indexed VCF file
<code>flank</code>	number of basepairs to flank gene model for search
<code>vcfSLS</code>	seqlevelsStyle (SLS) token for VCF; will be imposed on gene model
<code>genomeSLS</code>	character tag for genome, to be used with readVcf
<code>stats</code>	passed to ld
<code>depth</code>	passed to ld

Value

sparse matrix representation of selected LD statistic, as returned by [ld](#)

Note

Uses an internal function `genemod4ldblock`, that relies on `EnsDb.Hsapiens.v75` to get gene model.

Examples

```
ld1 = ldByGene(depth=150)
image(ld1[1:200,1:200], col.reg=heat.colors(120), colorkey=TRUE,
      main="SNPs in MMP24 (chr20)")
```

ldmat

use LDmat API from NCI LDlink service

Description

use LDmat API from NCI LDlink service

Usage

```
ldmat(rsvec, pop = "CEU", type = "d", token = Sys.getenv("LDLINK_TOKEN"))
```

Arguments

<code>rsvec</code>	character vector of SNP ids
<code>pop</code>	three letter code for HapMap population, defaults to CEU
<code>type</code>	'r2' or 'd', defaults to 'd' implying d-prime
<code>token</code>	the API token provided by NCI, defaults to value of environment variable <code>LDLINK_TOKEN</code>

Value

`data.frame`

Examples

```
if (interactive()) ldmat(c("rs77749396", "rs9303279", "rs9303280", "rs9303281"))
```

ldmat,ldstruct-method *accessor for matrix component*

Description

accessor for matrix component

Usage

```
## S4 method for signature 'ldstruct'  
ldmat(x)
```

Arguments

x	instance of ldstruct
---	----------------------

ldstruct-class *Class "ldstruct"*

Description

Manage information about LD statistics as reported by HapMap.

Objects from the Class

Objects can be created by calls of the form new("ldstruct",...).

Examples

```
showClass("ldstruct")
```

s3_1kg *Create a URL referencing 1000 genomes content in AWS S3.*

Description

stack1kg produces a VcfStack instance with references to VCF for 1000 genomes autosomal chrs. S3-resident VCF files with version "v5a.20130502" are used.

Usage

```
s3_1kg(  
  chrnum,  
  tag = "20130502",  
  wrap = function(x) TabixFile(x),  
  tmp1 = NULL,  
  dropchr = TRUE  
)
```

Arguments

<code>chrnum</code>	a character string denoting a chromosome, such as '22'
<code>tag</code>	a character string identifying the version, ignored if <code>tmpl</code> is non-null; valid <code>tag</code> values are the default or "20101123"
<code>wrap</code>	The URL is returned after evaluating <code>wrap</code> on it; default is useful when Tabix indexing is to be used
<code>tmpl</code>	alternate template for full URL, useful if versions prior to 2010 are of interest
<code>dropchr</code>	if TRUE <code>chrnum</code> will have 'chr' removed if present

Value

by default, a [TabixFile](#) instance

Examples

```
s3_1kg("22")
## Not run:
require(VariantAnnotation)
scanVcfHeader(s3_1kg("22"))

## End(Not run)
```

sampinf_1kg

population and relationship information for 1000 genomes

Description

population and relationship information for 1000 genomes

Usage

`sampinf_1kg`

Format

`data.frame`

Source

ftp://ftp.1000genomes.ebi.ac.uk/vol1/ftp/technical/working/20130606_sample_info/20130606_sample_info.xlsx, to which superpopulation codes were added

stack1kg	<i>couple together a group of VCFs</i>
----------	--

Description

couple together a group of VCFs

Usage

```
stack1kg(chrs = as.character(1:22), index = FALSE, useEBI = TRUE)
```

Arguments

chrs	a vector of chromosome names for extraction from 1000 genomes VCF collection
index	logical telling whether VcfStack should attempt to create the local index; for 1000 genomes, the tbi are in the cloud and will be used by readVcf so FALSE is appropriate
useEBI	logical(1) defaults to TRUE ... use tabix-indexed vcf from EBI

Value

VcfStack instance

Note

The seqinfo component of returned stack will have NA for genome. Please set it manually; for useEBI=TRUE this would be GRCh38.

Examples

```
if (interactive()) {
  st1 = stack1kg()
  st1
}
```
