

Bioconductor Award 2023

Certificate

Matthew Ritchie

For outstanding contributions to the Bioconductor project and community

Matt has contributed to and supervised the development of many excellent packages in the Bioconductor universe (scPipe, BeadArray, Glimma, CellBench, etc). However, what stands out are his contributions to make workflows more accessible to users. His 2016 F1000 paper is probably one of the most used Bioinformatics tutorials in the world. His wish to educate scientists has driven him to teach workshops in Australia and China. This sense of promoting Bioconductor use around the world also led him to take on the role of chair and co-chair of the Community Advisory Board for several years. In this role, he emphasised diversity, education, and transparency. In summary, the Bioconductor project has become stronger through Matt's outstanding contribution.
