

# Package ‘GGdata’

September 23, 2012

**Title** all 90 hapmap CEU samples, 47K expression, 4mm SNP

**Description** data exemplars dealing with hapmap SNP reports, GWAS, etc.

Version 1.0.19

**Author** VJ Carey <stvjc@channing.harvard.edu>

**Maintainer** VJ Carey <stvjc@channing.harvard.edu>

## biocViews ExperimentData, HapMap

**Depends** R (>= 2.12.0), methods, Biobase (>= 2.5.5), GGBase, snpStats, illuminaHumanv1.db, AnnotationDbi

### **Enhances GGtools**

**LazyLoad** yes

License LGPL

## R topics documented:

hmceuB36 . . . . .	1
<b>Index</b>	<b>3</b>

hmceuB36 representations of HapMap snp data + expression data

## Description

representations of HapMap snp data + expression data

## Usage

```
# getSS("GGdata", "20") # for example, to get full expression, + genotypes  
# on chr20
```

## Format

ExpressionSet and SnpMatrix instances to be combined using getSS

## Details

Instances of class [sm1Set](#) are created from two basic sources.

First, the expression data for 90 CEU families in CEPH were obtained from SANGER GENEVAR project.

Second, data on forward non-redundant SNPs in these individuals the HapMap build 36 ftp site in march 2008. Full provenance information still to be supplied.

## Value

instances of class [sm1Set](#)

## Note

As of March 2011 the sm1Set is no longer serialized. Instead, use `getSS("GGdata", [chrs])` to create an sm1Set with all probes and selected chromosomes. There is an instance of [ExpressionSet-class](#) named ex in the data folder of this package that will be united with genotype data using `getSS`.

## Author(s)

Vince Carey <stvjc@channing.harvard.edu>

## Examples

```
library(GGtools)
hmceuB36 = getSS("GGdata", c("20")) # just 1 chromosome
exprs(hmceuB36)[1:4,1:4]
as(smList(hmceuB36)[[1]][1:4,1:4], "character")
library(GGtools)
library(illuminaHumanv1.db)
cptag = get("CPNE1", revmap(illuminaHumanv1SYMBOL))
tt = eqtlTests(hmceuB36[probeId(cptag),] , ~male)
topFeats(probeId(cptag), mgr=tt, ffind=1)
```
