Software and Documentation Version

This user manual is based on KiCad 9.0.6. Functionality and appearance may be different in other versions of KiCad.

Documentation revision: 90da21fb.

Introduction to the KiCad Drawing Sheet Editor

The Drawing Sheet Editor is a tool to create custom drawing sheets for use in the KiCad Schematic and Board Editors. Drawing sheets can include custom title blocks, frames, logos, as well as other text and graphics.

The frame, title block, and other graphic items (logos) are collectively called a **drawing sheet**.

Basic drawing sheet items are:

- 線(Line)
- 矩形(Rect)
- Text (with keywords that will be replaced by the actual text, like the date, page number...) in the Schematic or Board Editors.
- 重畳された多角形(Poly) (主にロゴや特別な図形を配置するためのもの)
- ビットマップ(Bitmap)。

WARNING

注意：ビットマップ(Bitmap)は一部の出力形式（PDFとPS）でのみプロットできます。それ以外の出力形式では、ただの四角形として出力されます。

- Items can be repeated, and text and poly_polygons can be rotated.

Drawing Sheet Editor files

The Drawing Sheet Editor reads and writes KiCad drawing sheet files (`.kicad_wks`). These files can be used as custom drawing sheets for schematic and PCB designs by selecting a custom drawing sheet in the **Page Setup** dialog in each editor.

When the Drawing Sheet Editor is first opened, it displays the default KiCad drawing sheet is used until a different drawing sheet file is opened.

動作の詳細

Basic drawing sheet item properties

Basic drawing sheet items are:

- **線(Line)**
- **矩形(Rect)**
- **Text** (with keywords, with will be replaced by the actual text, like the date, page number...) in the Schematic or PCB Editors.
- **Poly-polygons** (mainly to place logos and special graphic shapes). These poly polygons are created by the **Image Converter** tool, and cannot be built inside the Drawing Sheet Editor, because it is not possible to create such shapes by hand.
- **ビットマップ(Bitmap)** (ロゴを配置するための)

WARNING | ビットマップ(Bitmap)は一部の出力形式 (PDFとPS) でのみプロットできます。

また :

- **Text**, **poly-polygons** and **bitmaps** are defined by a position, and can be rotated.
- **線(Line)** (多数のセグメントから成る) と **矩形(Rect)** は始点/終点の2点の指定となります。これらは回転できません。(セグメントに対して無効です)

基本的な要素は、繰り返し配置が可能です。

Repeated text also accepts an increment value for labels (has meaning only if the text is one letter or one digit).

座標系の設定

Each position, start point and end point of items is always relative to a page corner. This feature allows you to define a drawing sheet which is not dependent on the paper size.

ページの角（カド）と座標系

- 用紙サイズが変更された場合も、それぞれの要素は基準となるページの角との関係を保ちます。
- 通常、タイトルブロックは用紙サイズに依らずにページの右下へ表示されます。これは要素を作成した際に右下の角を原点として設定している為です。

矩形(Rect)や線(Line)は、それぞれ原点となる角を指定した2点の座標指定で指定されます。

回転

Items which have a position defined by just one point (text and poly-polygons) can be rotated:

通常時 : 回転 = 0°

Rotated Text

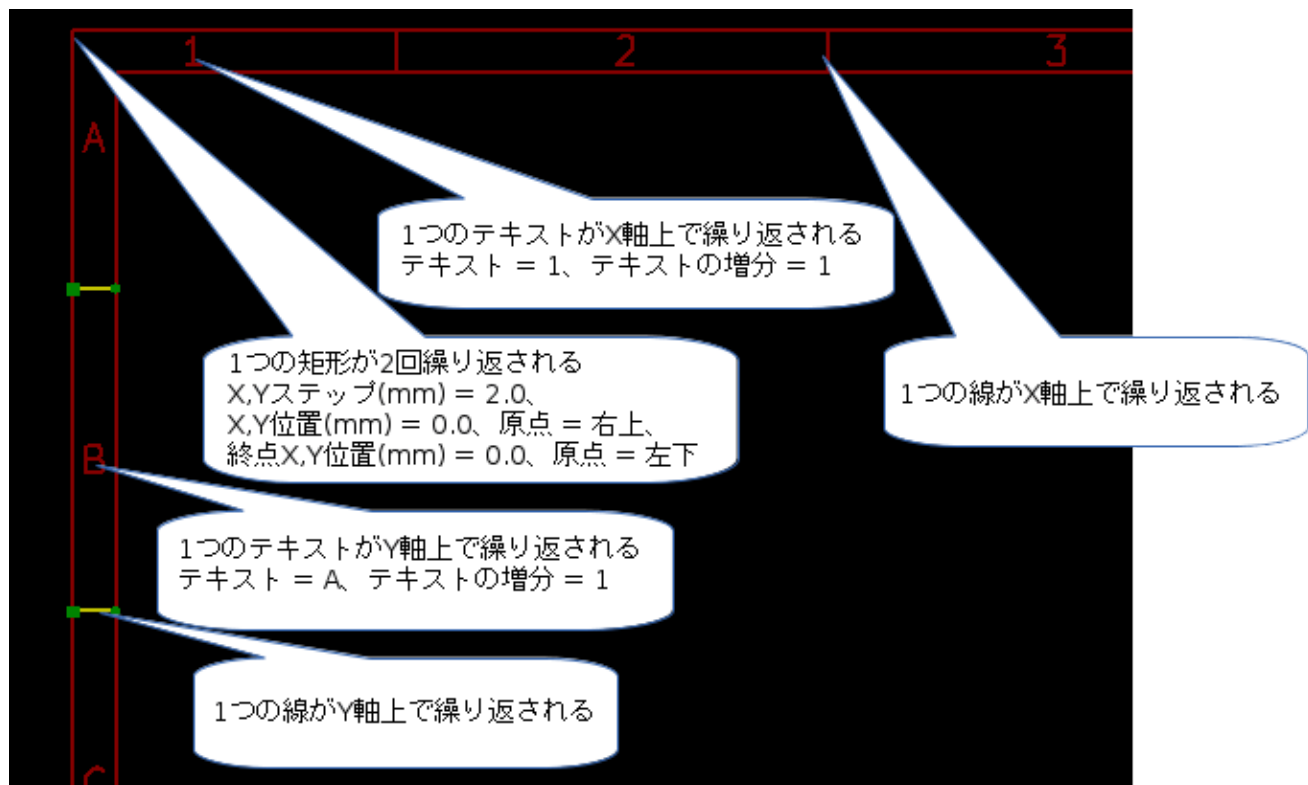

回転指定 : 回転 = 20° / 10°

繰り返し設定

要素は繰り返して配置を行うことができます。

これはグリッド線やグリッドのラベルを作成する際に便利な機能です。

Text and keywords

Keywords

Text can be simple strings or can include keywords.

Keywords are replaced by actual values when the drawing sheet is used in a schematic or PCB design. They behave like [text variables](#) in the Schematic and Board Editors, except the values are either automatically set by the editor or set by the user in the Page Setup dialog of the respective editor.

The keyword syntax is `${KEYWORD}`. The keyword, including the surrounding `${}`, will be replaced by the keyword's value.

Keyword name	Description
KICAD_VERSION	Version number of KiCad.
#	Sheet number.
##	Total number of sheets.
COMMENT1 - COMMENT9	Contents of the Comment<n> field in Page Setup.
COMPANY	Contents of the Company field in Page Setup.
FILENAME	Filename of the schematic or PCB design file, with a file extension.
ISSUE_DATE	Contents of the Issue Date field in Page Setup.
LAYER	Name of the current PCB layer. This is blank in the Schematic and Board Editors. It is only shown in plots of PCB designs.
PAPER	Current sheet's paper size, which is set in Page Setup.
REVISION	Contents of the Revision field in Page Setup.
SHEETNAME	Sheet name of the current sheet. This is blank in the Board Editor.
SHEETPATH	Sheet path of the current sheet. This is blank in the Board Editor.
TITLE	Contents of the Title field in Page Setup.

For example, `Size: ${PAPER}` displays "Size: A4" when the paper size is set to A4.

Multi-line text

Text can be multi-line.

There are 2 ways to insert a new line in text:

1. Insert the `\n` 2 chars sequence (mainly in Page setup dialog in KiCad).
2. Insert a new line in the Drawing Sheet Editor Design window.

下記に例を示します：

セットアップ

出力

```
multi-line text
line 2: a long line
line 3
line 4
```

Multi-line text in Page Setup dialog

In the Page Setup dialog, text controls do not accept multi-line text.

The `\n` 2 character sequence should be inserted to force a new line inside a text object.

Here is a two line text object, in the Comment2 field:

Comment1:

実際の図面上では、下記のように表示されます：

However, if you really want the `\n` inside the text, enter `\\n`.

Comment1:

この場合、実際の図面上では、下記のように表示されます：

制限の設定

1ページ目の設定

When using the Schematic Editor, the full schematic often uses more than one page.

Usually drawing sheet items are shown on all pages, but you can also set each item to be shown only on the first page or on all pages except the first page. To change which pages an item is shown on, use the dropdown in the the item's **Item Properties** panel. Options are **show on all pages**, **first page only**, and **subsequent pages only**.

Text maximum size constraint

Text items have a maximum size constraint. You can set a **maximum height** and **maximum width**, which together form a bounding box defining the maximum size of the text object.

The screenshot shows the 'Properties' panel for a text object. It has two tabs: 'Item Properties' (selected) and 'General Options'. Under 'Item Properties', there is a 'Text' label, a 'Help' button, and a 'Show on all pages' dropdown. Below this is a text input field containing 'A long line of text'. Underneath the input field is a toolbar with icons for bold (B), italic (I), left-align, center-align, right-align, justify, and a background color selector. Below the toolbar is a 'Font' dropdown menu set to 'Default Font'. At the bottom, there are four input fields for size constraints: 'Text width' (0 mm), 'Text height' (0 mm), 'Maximum width' (12 mm), and 'Maximum height' (0 mm). A note at the bottom right says 'Set to 0 to use default values'.

If the text object is bigger than the maximum size in a given dimension, the text object will be dynamically compressed in that dimension in order to fit within the bounding box. This will result in the text being visually distorted. If the text fits within the bounding box, the text will not be compressed.

When either parameter is set to 0, KiCad will not enforce a maximum size in that dimension.

Some text with the maximum height and width set to 0:

A long line of text

The same text compressed because the maximum width is set smaller than the width of the text:

A long line of text

Invoking the Drawing Sheet Editor

The Drawing Sheet Editor is typically invoked from a command line, or from the KiCad Project Manager.

コマンドラインから起動する場合、 `pl_editor <*.kicad_wksファイルパス>` として呼び出してください。

Drawing Sheet Editor Commands

メイン画面

The image below shows the main window of the Drawing Sheet Editor.

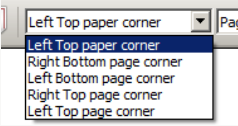

The main part of the screen is the editing canvas for the open drawing sheet.

The right pane is a properties editor for editing the selected item. It only appears when an item is selected in the canvas.

メインウィンドウのツールバー

画面上部に表示されているツールバーから、下記のコマンドを呼び出すことができます：

	Create a new drawing sheet.
	Load a drawing sheet file.
	Save the current drawing sheet in a .kicad_wks file.
	Display the page size selector and the title block user data editor.
	Prints the current page.
	Undo/redo tools.
	Zoom in, out, redraw and auto, respectively.
	Show the drawing sheet in Preview mode: text is shown like in the Schematic or PCB Editors, with text keywords replaced by user text.
	Show the drawing sheet in Edit mode: text is displayed "as is", without any keyword replacement.
	Reference corner selection, for coordinates displayed to the status bar.
	<p>Selection of the page number (page & or other pages).</p> <p>This selection has meaning only if some items than have a page option, are not shown on all pages (in a schematic for instance, which contains more than one page).</p>

描画エリア(描画パネル)でのコマンド

キーボードショートカット

F1	拡大
F2	縮小
F3	画面の再描画
F4	現在のカーソル位置の描画を画面中央へ移動させます
Home	画面全体を表示
スペースキー	dx/dy 表示座標をカーソル位置でゼロリセットします。（dx/dy座標は画面下部ステータスバーに表示されます）
→（右矢印）	カーソルを1グリッド分右へ移動します。
←（左矢印）	カーソルを1グリッド分左へ移動します。
↑（上矢印）	カーソルを1グリッド分上へ移動します。
↓（下矢印）	カーソルを1グリッド分下へ移動します。

マウス操作

ホイール	現在のカーソル位置を中心に拡大/縮小
Ctrl + ホイール	左右方向へスクロール
Shift + ホイール	上下方向へスクロール
右クリック	コンテキストメニューの表示

コンテキストメニュー

(右クリックメニュー)

- 線の追加
- 矩形を追加
- テキスト入力
- Add Bitmap
- 中央/ズームイン/ズームアウト/ビューの再描画/自動ズーム/ズームの選択
- グリッドの選択

ステータスバー

The status bar is located at the bottom of the Drawing Sheet Editor and provides useful information to the user.

	Z 0.58	X 14 Y 14	dx 14 dy 14	原点位置: 用紙の左上角	mm
--	--------	-----------	-------------	--------------	----

Coordinates are always relative to the corner selected as the reference corner in the reference corner dropdown in the menubar.

Properties editor

The right pane is a properties editor. It only appears when an item is selected in the canvas. The **Item Properties** tab contains properties for the selected item. These properties depend on what type of item is selected. The **General Options** tab lets you edit default properties and margins for the *sheet.

Changes made in the properties editor are not applied until you click the **Apply** button.

The image displays two side-by-side screenshots of the 'Properties' editor interface, showing different tabs.

Left Screenshot (Item Properties tab):

- Properties** (selected tab) | General Options
- Text** (selected item type) | Help | Show on all pages (dropdown)
- Text content: `$(COMMENT3)`
- Font: Default Font (dropdown)
- Text width: 0 mm
- Text height: 0 mm
- Maximum width: 0 mm
- Maximum height: 0 mm
- Comment: Comment 2
- Position: X: 109 mm, Y: 29 mm, From: Lower Right (dropdown)
- Line width: 0 mm
- Rotation: 0.000
- Repeat Parameters: Count: 1, Step text: 1, Step X: 0 mm, Step Y: 0 mm
- Apply button

Right Screenshot (General Options tab):

- Properties** | General Options (selected tab)
- Default Values
- Text width: 1.5 mm
- Text height: 1.5 mm
- Line thickness: 0.15 mm
- Text thickness: 0.15 mm
- Set to Default button
- Page Margins
- Left: 10 mm
- Right: 10 mm
- Top: 10 mm
- Bottom: 10 mm
- Apply button

Design Inspector window

The Design Inspector shows a table of every item in the drawing sheet and their properties. Selecting an item in the Design Inspector also selects the item on the canvas and leaves it selected when you close the Design Inspector.

To open the Design Inspector, use **Inspect** → **Show Design Inspector**.

<default drawing sheet>					
	-	Type	Count	Comment	Text
1	→	Layout	-	A3	Size: 420.0x297.0mm
2	□	Rectangle	1	rect around the title block	
3	□	Rectangle	2		
4	└	Line	30		
5	T	Text	100		1
6	└	Line	30		
7	T	Text	100		1
8	└	Line	30		
9	T	Text	100		A
10	└	Line	30		
11	T	Text	100		A
12	T	Text	1		Date: \${ISSUE_DATE}
13	└	Line	1		
14	T	Text	1	Kicad version	\${KICAD_VERSION}
15	└	Line	1		
16	T	Text	1		Rev: \${REVISION}
17	T	Text	1	Paper format name	Size: \${PAPER}

Cancel

Interactive editing

要素の選択

要素を選択するには、下記の3通りの方法があります：

- From the Design Inspector
- 対象の要素の上で左クリックする
- 対象の要素の上で右クリックする（要素が選択されると同時に、メニューが表示されます）

When selected, this item is drawn in a lighter shade of color and the properties editor will be displayed for the selected item.

When right clicking on the item, a pop-up menu is displayed. The pop menu contents depend on the type of object selected.

要素の作成

To add a new item, use the appropriate button in the right toolbar and then click on the canvas. The item will be added to the canvas and selected, and the properties editor for the new item will open. You can edit the item's properties in the properties editor, then click **Apply** to modify the new item.

The available items are lines (), rectangles (), text (), and bitmaps ().

You can also add new items from the right-click context menu.

Logos must first be created by the Image Converter tool, which creates a page layout description file. You can use the **Append Existing Drawing Sheet** command to insert the logo (a poly polygon) contained in the new drawing sheet.

Adding lines, rectangles and text

When you add lines, rectangles, or text, the item will be added to the canvas, selected, and shown in the properties editor. You can edit the item's properties in the properties editor, then click **Apply** to apply the changes.

You can also move the item in the canvas after it has been placed by dragging it or using the Move command (kbd:[M]). Lines and rectangles can be moved as a shape, but you can also move their points individually.

Lines and rectangles typically use the same corner reference for both the start and end points. If this is not the case, the item's geometry will change when the sheet size or margins are changed.

ロゴの追加

To add a logo, a poly polygon (the vectored image of the logo) must be first created using the Image Converter tool, which is available in the main KiCad Project Manager window. Polygons cannot be created by hand.

The Image Converter tool creates a drawing sheet file which contains only one item: a poly polygon representing the source image. This drawing sheet file is appended to the current design, using the **Append Existing Drawing Sheet** command.

NOTE

This command can be used to append any drawing sheet file, regardless of what items it contains. All items in the appended file will be added to the current design.

一度ロゴを取り込んだ後、移動や編集ウィンドウによるパラメータの編集が可能です。

ビットマップ(Bitmap)の追加

You can add an image bitmap using many common bitmap formats (PNG, JPEG, BMP, etc.).

- 追加された画像ファイルは、300PPI(Pixel/Inch)として設定されます。
- This value can be modified in the properties editor.
- The actual size of the bitmap in the drawing sheet depends on this parameter.
- Be aware that using higher definition values brings larger output files, and can have an effect on draw or plot time.

Bitmaps can be repeated but not rotated.
